

PHYSICS LABORATORY

Physics laboratory has got all the necessary equipments and set - up that caters to the need of all Diploma Engineering branches as the GTU curriculum. The lab has got immense significance to improve the basic understanding of the concepts, laws and theories of physics and it also bridges the gap between understanding and application of the concepts. The physics lab emphasizes hands on experience with well prescribed experiments which can be modified to go well with a wide range of students. During the semester students are assigned various mini-projects and asked to make working models based on the concepts of Physics. In the laboratory, the students are encouraged to take responsibility and have conscientious attitude towards their own work and study by providing controlled but stimulating environment and demonstrating positive attitude and values rooted in mutual respect. The students are progressively guided to reflect on the progress they have made during the semester.
