

English Language Laboratory

To fill the gap between schooling and engineering program of the newly admitted students, Department of Science and Humanities plays the role of bridge between their schooling and their further technical education. These new students get the first-hand experience and chance to take their communication skills to the next level in English Language Laboratory. For the first time in the practical of English, the students can relate their theoretical knowledge with the real life application. This upgrades for the overall development of the learner and enhances the ability to Listen, Speak, Read and Write (LSRW). Students can choose what they want to study and learn at their own pace as learning content can be adjusted to suit each student's individual need. With the help of presentation, group discussion and role play, their personality is enhanced and they become confident and well-groomed. Power point presentation and letter writing make them learn to use the latest teaching-learning modules which will make them go a long way. In addition, to indulge the students in co-curricular activities, students are inspired to participate in debates, quizzes and seminars, through which they get good oratory skills, knowledge and subject proficiency. English Language Laboratory provides solutions to different learning problems in a sequential manner to improve LSRW skills faster and accurately and enlarge the scope of learning in all spheres of life; personal, academic and professional. These types of skills help them to be more acceptable in placement and successful in their professional life.
